Re Item IV.

The separate inventions/groups of inventions are:

- | | |
|-------|---|
| 1-26 | Mobile station with means for signal-strength-measurment based position determination means in addition to satellite based position determination means |
| 27-29 | docking station for mobile terminal |

They are not so linked as to form a single general inventive concept (Rule 13.1 PCT) for the following reasons:

The application lacks unity within the meaning of Article 82 EPC for the following reasons:

The common concept linking together the independent claims 1 and 27 is the provision of a mobile terminal. This common feature is not novel. None of the other features found in each of the first independent claim is found in the other independent claim.

Re Item V.

- 1 The following documents are referred to in this communication:
D1 : US 6 449 486 B1 (RAO PADMANABHA R) 10 September 2002 (2002-09-10)

Mobile phone(see D1, column 1, line 22), in a telephone communication network comprising base stations (see D1, Figure 1);

- detection means for detecting both a strength value corresponding to the strength of a signal received from the present base station and an identification code of the present base station (see D1, column 2, line 5-9 and column 3, line 48-51);
- position information reception means for receiving an information signal of a satellite-based positioning system (see D1, column 2, line 12-13);

- first computation means for computing the current position of the mobile phone based on the signal received by the position information reception means (see D1, column 3, line 67 - column 4, line 2);
- second computation means for computing the current position of the mobile phone based on the strength value and the identification code detected by the detection means (see D1, column 4, line 39-42); and
- characterised in that the mobile phone further comprises
- position message compiling means for compiling a position message comprising the most current position values computed by the first and second computation means; wherein the communication means is adapted to send the position message via said telephone communication network (see D1, column 3, line 19-21 and line 65-67 and column 5, line 31-36).

3 DEPENDENT CLAIMS 2-26

Dependent claims 2-26 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty and/or inventive step (Article 33(2) and (3) PCT).
